The Case for Global Property Equities

Published June 2019

Listed real estate stocks including real estate investment trusts (REITs) have the potential to offer investors a liquid, low-cost and transparent way to invest in property. Over the long term, returns from listed real estate have exceeded those from direct (physical) real estate. The Janus Henderson Global Property Equities Team believes an active, selective and focused approach is capable of delivering attractive returns to investors.

The Case for Investing in Property Equities:

1) Potential for listed real estate to increase returns and decrease risk in a balanced portfolio

Over the long term, returns from listed real estate have exceeded those from direct (physical) real estate*. While the compromise in the short term tends to be greater volatility, this is often more than offset in the longer term by the higher returns and higher liquidity compared to investing in direct real estate. Exhibit 1 shows that adding property equities to a diversified portfolio is capable of enhancing returns without increasing risk.

*Source: European Public Real Estate Association (EPRA). Global listed real estate 9.5% vs. global physical real estate 7.4%, 15 years annualized total returns as of 6/30/18.

Exhibit 1: Effect of Adding Property Equities to a Balanced Portfolio

Source: Janus Henderson Investors, European Public Real Estate Association (EPRA), as of 3/31/19. The efficient frontier shows the minimum variance portfolio (or least-risky portfolio) for a given rate of return. The resulting line shows the most efficient portfolio for any given combination of risk and return. Rational investors will construct portfolios that have risk-return profiles that are located on this frontier. The efficient frontiers are calculated using data from a rolling 10-year period from 3/31/09 to 3/31/19.

2) High current dividend yield with consistent growth

The listed property sector offers investors an attractive income proposition, characterized by consistent earnings and dividend growth. Over the long term, reinvested dividends have accounted for around two-thirds of global REIT returns.*

REITs offer an attractive income return compared to major government bond yields and the wider equity market (see Exhibit 2).

Exhibit 2: Global REITs offer Higher Dividend Yields than Government Bonds and Most Global Equities

Listed real estate can also offer predictable cash flow growth as many lease contracts feature rents indexed to grow annually with inflation. A strong economy also leads to increased demand for space and lower vacancies, allowing landlords to increase rents as many leases mature. This cash flow growth supports REIT dividends, which have consistently grown in excess of inflation.

The Case for Global Property Equities

3) Favorable risk-adjusted returns versus general equities and bonds

Over the longer term, listed property has delivered higher returns (Exhibit 3) and lower correlation compared to general equities and fixed income alternatives. The sector's attractive and differentiated return profile comes from a combination of a high starting yield, inflation-linked earnings growth, and price appreciation from a real physical asset.

4) Accessible diversification of high-quality real estate

The listed property sector enables investors to benefit from global ownership of high quality real estate assets with professional management platforms and daily liquidity. Key attributes of listed property such as property sector and geographic diversification, transparent disclosures and daily pricing are not generally available through other forms of real estate ownership.

The listed property sector has seen significant growth as high-quality companies come to market and existing businesses have leveraged their operational expertise. This fact was recognized when real estate was added as a unique Global Industry Classification Standard (GICS) sector in 2016. A larger, more liquid sector provides more opportunities for active investors as well as potential for additional earnings growth for companies through economies of scale.

Despite this growth, only around 10% of commercial real estate assets are currently held by listed public companies as of March 31, 2018, according to the European Public Real Estate Association (EPRA). As a result we believe the listed property sector is set for many years of structural growth ahead (Exhibit 4).

Reasons why We Believe Investors Should Consider Investing in Listed Property Now:

1) REITs are not bonds – the potential for cash flow grows

Like bonds, REITs can offer a consistent income stream. However, REIT income is uniquely characterized by consistent earnings and dividend growth, offering an element of resiliency and the potential to increase cash flows. In fact, global real estate has historically shown a low correlation to general bonds as well as equities (Exhibit 5), offering investors the opportunity to diversify their investments to potentially reduce risk and boost long-term returns.

Given current demographic trends, high debt levels and the deflationary impact from technological change, the Janus Henderson Global Property Equities Team believes that inflation and interest rates will remain lower for longer. As such, for investors seeking a consistent income stream, continued earnings and dividend growth should matter more than ever. We believe REITs are well placed to deliver this.

The Case for Global Property Equities

2) Access to areas of structural growth

Increasingly sophisticated technology, rapid urbanization and shifts in demographics have fundamentally changed consumer behavior and altered the needs and uses for real estate (Exhibit 6). With this evolution there are opportunities to invest in listed real estate companies who could benefit from long-term secular tailwinds, while avoiding those who may ultimately find themselves on the wrong side of history. Such companies are enjoying the benefits of pricing power and relatively low capex requirements, which should support greater income and capital appreciation for investors in the future.

3) Public real estate is cheaper than private markets

A key metric for the valuation of the sector is where listed property companies trade relative to the private market value of underlying property owned by the companies (their net asset value, or NAV). Since 2017 global REITs have consistently traded at average discounts to estimated private market net asset values (Exhibit 7). While a discount to NAV may be warranted in a period of slowing NAV growth, this current discount may be an attractive entry point, given the ability to buy assets cheaper on Wall Street than on Main Street. Furthermore, a persistent NAV discount can potentially trigger more mergers and acquisitions in the sector, as seen in recent years.

Summary

Looking ahead, although capital growth has moderated, in our opinion, the underlying fundamentals for the listed property sector remain robust. Supply and demand remains well balanced in most cities and sectors and investor demand for physical real estate, a real asset with a consistent income stream, is healthy. However, the spread of returns within property stocks is likely to widen in the years ahead given both cyclical and structural forces, meaning it is increasingly important to be selective.

The key risk to this base case is that stronger-than-expected economic growth causes the long end of the yield curve to rise more sharply. This would be negative for the asset class. However, the team believes that longer-term trends in demographics, technology disruption and debt may keep rates lower going forward.

Against this backdrop, an active and selective approach enables the Janus Henderson Global Property Equities Team to continue to find investment opportunities within the listed property sector. The focus remains on companies capable of growing income and dividends and those best placed to benefit from technological advances, which we believe are changing consumer behavior and altering the needs and uses for real estate.

Opportunities for Active Managers

The Janus Henderson Global Property Equities Team's fundamental belief is that identifying long-term growth within real estate markets is key. For example, technological advances have fundamentally changed consumer behavior and altered the needs and uses for real estate. This creates opportunities for active managers. The team invests in more than REITs; the broad investible universe is not defined by an index. More than 500 real estate companies are covered globally with team members based in London, Singapore and Chicago. These may include off-benchmark securities, such as companies focused on fast growing alternative sectors such as data centers, cell towers and manufactured housing. The eight-member team's deep investment expertise offers investors investment opportunities not available through ETFs (exchange-traded funds) or some other global property equity strategies.
