INVESTORS

Index represents the MSCI World Index<sup>SM</sup>.

Performance for Class D Shares that includes periods prior to 6/5/17 reflects the performance of a share class of a predecessor fund, adjusted, where applicable and permitted, for differing fees and expenses. See the Fund's prospectus for further details. Returns include reinvestment of dividends and capital gains. Returns greater than one year are annualized.

Holdings are subject to change without notice.

There is no assurance the stated objective(s) will be met.

Equity country, regional, sector and industry weights based on MSCI and GICS classifications. Fixed income country, regional, sector and industry weights based on Bloomberg Barclays classifications.

Investing involves risk, including the possible loss of principal and fluctuation of value.

Foreign securities are subject to additional risks including currency fluctuations, political and economic uncertainty, increased volatility, lower liquidity and differing financial and information reporting standards, all of which are magnified in emerging markets.

Fixed income securities are subject to interest rate, inflation, credit and default risk. The bond market is volatile. As interest rates rise, bond prices usually fall, and vice versa. The return of principal is not guaranteed, and prices may decline if an issuer fails to make timely payments or its credit strength weakens.

Initial Public Offerings (IPOs) are highly speculative investments and may be subject to lower liquidity and greater volatility. Special risks associated with IPOs include limited operating history, unseasoned trading, high turnover and non-repeatable performance.

Index performance does not reflect the expenses of managing a portfolio as an index is unmanaged and not available for direct investment.

**MSCI World Index<sup>SM</sup>** reflects the equity market performance of global developed

markets. **75% MSCI World / 25% BBgBarc Global Agg Credit (USD Hedged) Index** is an internally-calculated, hypothetical combination of total returns from the MSCI World Index<sup>SM</sup> (75%) and the Bloomberg Barclays Global Aggregate Credit Index (USD Hedged) (25%). **Alpha** compares risk-adjusted performance relative to an index. Positive alpha means outperformance on a risk-adjusted basis. **Beta** measures the volatility of a security or portfolio relative to an index. Less than one means lower volatility than the index; more than one means greater volatility. **R-squared (R<sup>2</sup>)** measures the relationship between portfolio and index performance on a scale of 0.00 (0%) to 1.00 (100%). A higher R<sup>2</sup> indicates more of the portfolio's performance is affected by market movements and vice versa. **Standard Deviation** measures historical volatility. Higher standard deviation implies greater volatility. **Sharpe Ratio** measures risk-adjusted performance using excess returns versus the "risk-free" rate and the volatility of those returns. A higher ratio means better return per unit of risk. **Active Share** represents the portion of portfolio holdings that differ from an index. **Duration** measures a bond price's sensitivity to changes in interest rates. The longer a bond's duration, the higher its sensitivity to changes in interest rates and vice versa.

**Please consider the charges, risks, expenses and investment objectives carefully before investing. For a prospectus or, if available, a summary prospectus containing this and other information, please call Janus Henderson at 800.525.3713 or download the file from [janushenderson.com/reports](http://janushenderson.com/reports). Read it carefully before you invest or send money.**
