Index represents the MSCI World Health Care Index<sup>SM</sup>.

Performance for Class D Shares that includes periods prior to 2/16/10 reflects the performance of one or more share classes of the Fund or a predecessor fund, adjusted, where applicable and permitted, for differing fees and expenses. See the Fund's prospectus for further details.

Returns include reinvestment of dividends and capital gains. Returns greater than one year are annualized.

Holdings are subject to change without notice.

There is no assurance the stated objective(s) will be met.

Equity country, regional, sector and industry weights based on MSCI and GICS classifications. Fixed income country, regional, sector and industry weights based on Bloomberg Barclays classifications.

Investing involves risk, including the possible loss of principal and fluctuation of value. Foreign securities are subject to additional risks including currency fluctuations, political and economic uncertainty, increased volatility, lower liquidity and differing financial and information reporting standards, all of which are magnified in emerging markets.

Concentrated investments in a single sector, industry or region will be more susceptible to factors affecting that group and may be more volatile than less concentrated investments or the market as a whole.

Initial Public Offerings (IPOs) are highly speculative investments and may be subject to lower liquidity and greater volatility. Special risks associated with IPOs include limited operating history, unseasoned trading, high turnover and non-repeatable performance.

Index performance does not reflect the expenses of managing a portfolio as an index is unmanaged and not available for direct investment.

# Janus Henderson

MSCI World Health Care Index<sup>™</sup> reflects the performance of health care stocks from global developed markets. S&P 500<sup>®</sup> Index reflects U.S. large-cap equity performance and represents broad U.S. equity market performance. Alpha compares risk-adjusted performance relative to an index. Positive alpha means outperformance on a risk-adjusted basis. Beta measures the volatility of a security or portfolio relative to an index. Less than one means lower volatility than the index; more than one means greater volatility. R-squared (R<sup>2</sup>) measures the relationship between portfolio and index performance on a scale of 0.00 (0%) to 1.00 (100%). A higher R<sup>2</sup> indicates more of the portfolio's performance is affected by market movements and vice versa. Standard Deviation measures historical volatility. Higher standard deviation implies greater volatility. Sharpe Ratio measures risk-adjusted performance using excess returns versus the "risk-free" rate and the volatility of those returns. A higher ratio means better return per unit of risk. Turnover is a measure of portfolio rading activity. Higher turnover may indicate higher transaction costs and vice versa.

Please consider the charges, risks, expenses and investment objectives carefully before investing. For a prospectus or, if available, a summary prospectus containing this and other information, please call Janus Henderson at 800.525.3713 or download the file from janushenderson.com/reports. Read it carefully before you invest or send money.
